1 Dear Residents of Presque Isle County,

We are excited to welcome a new District Forester in July! 2023 is poised to be a great year. With our first attempt at online sales a success, we continue to accept online orders. New species offered this year include Colorado Blue Spruce, Basswood or American Linden, American Black Currant, Nannyberry, Saskatoon Serviceberry, Staghorn Sumac, and Witch Hazel. Be sure to check out our five deciduous Assisted Tree Range Expansion Project (ATREP) species. Stay tuned to our website and Facebook page for upcoming events!

Contact us at **989-734-4000** or **presqueisle.cd@gmail.com**

Emily Frechette, District Manager

Deadline for all orders: Friday, April 21, 2023

**Order early to ensure you get the species you want!*

Pick-Up Dates:

Fri., May 5, 10am—4pm

Sat., May 6, 10am—1pm

Lakeside Pavilion

(next to the Marina)

If you are placing a large order, please place it ASAP. We will fill orders on a first-come, first-served basis.

Due to our expanded offerings, item descriptions have been abbreviated. To view full item descriptions, please visit our website <https://www.piconservation.org/annual-tree-sale.html> where you can place your order online!

Fruit Trees

10

Apple, apricot, and plum trees provide food not only for us, but also for wildlife. Fruit trees prefer full sun for best yields, and they do best on nutrient-rich, well-drained soil free from excessive weed pressure. Varieties listed here have been chosen for our specific climate, and each needs a different variety of apple, plum, or apricot to ensure pollination. Crabapples are used to pollinate apple trees. It is recommended to purchase in pairs.

Apple—Early Fuji—This productive, early - mid season strain matures about six weeks ahead of the standard Red Fuji, yet produces a higher percentage of Washington Extra Fancy fruit.

Apple—Idared—An early bloomer that ripens late, the Idared tree produces sweetly tart fruit that keeps well and even improves in storage. The crisp white flesh of its strikingly bright red apples is aromatic and fine-grained, and processes well.

Apple—Gibson Golden Delicious—This vigorous, productive mid-late bloomer is easy to handle and produces smooth-skinned fruit that is sweet and juicy. This selection is bred to russet less than standard Golden Delicious.

Apple—Royal Red Honeycrisp—New blush-type variety. Same flavor and flesh texture as its popular parent but has better color and storage characteristics. Mid-late season.

Crabapple, Manchurian—The white flower is a very prolific pollen producer. Blooms early and through midseason. Extremely winter hardy and disease resistant tree that is excellent for windbreaks, wildlife habitat, and ornamental uses.

Crabapple, Snowdrift—White flowering; very attractive to bees. Blooms mid to late season. Crabapple trees are wonderful for providing food and cover for wildlife on your property and providing pollination to other fruit trees.

Apricot, Robada—This large, early apricot bears flavorful fruit with a sweet bouquet. The firm flesh ripens to a deep orange, and the sun-exposed cheek blushes deep red.

Apricot, Wenatchee Moorpark—This tree is self-fruitful and a good pollinator. Fruits are large and yellow with greenish-yellow flesh. Good for home canning and drying.

Plum, Empress—This European variety is popular for good reason. The strong, vigorous tree produces large fruits that resemble the President Plum, with blue skin and amber flesh. Good flavor and eye appeal.

Plum, American—With their thick-growing branches and foliage, American plums are often planted close together in a single row as a windbreak. Strong roots mean these trees help prevent erosion and can tolerate a lot of water. Blossoms in mid-spring with a high yield of fruits ranging from tart to sweet.

Deadline for all orders: Friday, April 21, 2023

**Order early to ensure you get the species you want!*

Elderberry, Black (*Sambucus nigra*) Height: 8 - 20'

Tolerates a wide range of soils including heavy clay. Prefers moist soils high in organic matter and spreads quickly through root suckering and self-seeding. White flowers attract butterflies, and are followed by edible black berries.

Forysthia (*Forsythia intermedia* x 'Lynwood Gold') Height: 8 - 10'

A heavy bloomer that produces a profusion of yellow flowers in the early spring. This variety has a more upright growth habit than most forsythia. Prefers loose, well-drained soils high in organic matter and partial to full sun.

Hazelnut, American (*Corylus americana*) Height: 8'-16'

Full to partial sun, tolerates a wide variety of soils. Easy to grow. Requires two for cross-pollination to produce abundant crops of nuts. Nuts prized by humans and used by wildlife. Male catkins are a food staple of grouse in the winter.

Lilac (*Syringa vulgaris*) Height: 8 - 15'

Grows in a wide variety of soil types. Aromatic lavender and purple flowers bloom in May. This low-maintenance plant can be used for a screen. Lilacs provide cover and food for many species of birds and small animals and butterflies.

Nannyberry (*Viburnum lentago*) Height: 10 - 15'

Also known as wild raisin. Favors moist, rich sites. Grows in both shade and sun. Sports dark green, glossy foliage. Small, white, fragrant flowers in mid-to-late May followed by a fruit that turns black in the fall and resembles raisins in appearance. A favorite winter food for pheasant, bobwhite, & ruffed grouse.

Ninebark (*Physocarpus opulifolius*) Height: 6-9'

Often used on riverbanks, very hardy; can take full sun or shade. Drought-tolerant and often used in hedges due to dense habit. Unique exfoliating bark in the winter months, white flowers May-June; leaves change colors in fall.

Serviceberry, Saskatoon (*Amelanchier alnifolia*) Height: 10 - 20'

This thick-growing specimen makes an excellent choice for planting along the edges of woods or for large border plantings. A favorite of birdwatchers, young plants will begin to produce berries in their third year. Full sun to part shade, tolerant of moist soil. Blueberry-like flavor from berries after fragrant, pendulous white blossoms in late spring.

Sumac, Staghorn (*Rhus typhina*) Height: 15'

Tolerates a wide range of conditions, including extremely poor soil. The yellow-green flowers are fragrant and on female plants form dense clusters of bright red fruit that resemble torches. Non-poisonous fruit is eaten by turkey, bobwhite, ruffed grouse, pheasant and many others.

Winterberry (*Ilex verticillata*) Height: 3-12'

This species of holly is native to swampy areas of Eastern North America. A dioecious variety (separate male and female plants), Winterberry females produce the signature red berries. Full sun to part shade.

Witch Hazel (*Hamamelis virginiana*) Height: 10-20'

Needs consistent moisture in well-drained soil, and full to partial sun. Flowers require cold weather to develop. Blooms in fall/winter. Eye-catching yellow blooms are produced at the same time fruit from prior year's flowers matures.

Site preparation and weed control is crucial to a successful planting effort. Tilling the soil before planting can help the roots get established, but it is not absolutely necessary. The site should be as free as practical from competing weeds. Weeds can be controlled with tillage, mulch, or herbicides.

Appropriate spacing of your plants will help you to meet your conservation goals. The spacings given below are intended to be dense, and therefore suitable for the early years of a plantation. Once the trees have reached a height of 25-30 feet, the plantation should be thinned. Thereafter, thinning should be done approximately every 10-15 years until the trees are mature.

Tree Spacing for Reforestation

Species	In Rows	Between Rows	Trees Per Acre
Pines	6'	8'	907
Spruces	7'	9'	690
Hardwoods	10'	10'	435

For Windbreaks, Visual Screens, and Wildlife Habitat

Windbreaks should be a minimum of two rows wide, three or four is better. Mixing species within a windbreak will create habitat diversity and help prevent gaps should one species succumb to insects or disease. For windbreaks, minimum spacing between rows ranges from 12 ft. for shrubs and small trees, and up to 20 ft. for large trees.

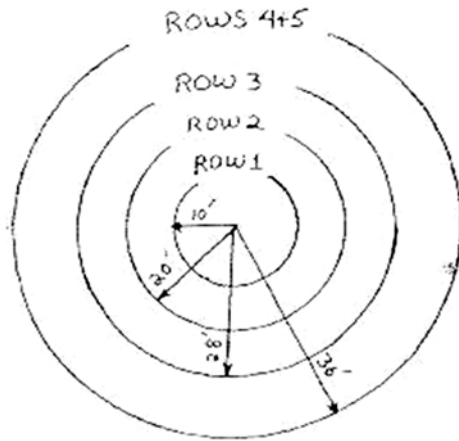

Spacing within rows ranges from a minimum of 3 ft. for small shrubs to a maximum of 16 ft. for large trees. For wildlife plantings, consider placing plants in clump arrangements. Always consider the mature height and width of any given plant to figure out how close to plant together.

Deadline for all orders: Friday, April 21, 2023

**Order early to ensure you get the species you want!*

Circular Clump Planting

Ideal for attracting wildlife to your property. If you have several acres, you could establish a new clump every year or so. Two to three clumps per acre is ideal.

Row 1: 9 conifers at 7 ft spacing

Row 2: 16 conifers at 7 ft spacing

Row 3: 25 conifers at 7 ft spacing

Row 4 & 5: ~57 hardwoods and shrubs in each row at 4 ft spacing in a staggered formation.

Guide to Species Selection

The charts on the following pages are to help you in selecting the appropriate species for your site conditions. Often trees can do well with slightly more or slightly less water and sun than indicated. For more detailed information on selecting trees and shrubs, please contact a member of our staff.

Deciduous Trees

Tulip* (Liriodendron tulipifera) Height: 80-120'

This fast-growing member of the Magnolia family is one of our largest native deciduous trees. Its distinctive tulip-shaped flowers appear in late spring and are a nectar source for ruby-throated hummingbirds. Needs full sun; prefers a deep, moist, well-drained soil.

Walnut, Black (Juglans nigra) Height: 70-100'

An excellent shade tree for large properties, Black Walnut should be sited with care, as it emits a chemical that is toxic to some other plants. Edible nuts are a food source for both squirrels and people. Needs full sun and prefers alkaline, moist, well-drained soil.

Shrubs

Ash, American Mountain (Sorbus americana) Height: 30'

This slow-growing species produces 1/4" orange-red fruit that is a favorite of grouse and other birds. Able to thrive in a variety of environments. Leaves turn shades of orange, red and purple in autumn.

Chokeberry (Aronia melanocarpa) Height: 8'

Glossy black edible berries are prized by grouse, other wildlife, and humans. Leaves turn brilliant red and orange in fall. Prefers full sun with moist, well-drained soil. Tolerates soil compaction, salt, and drought.

Cranberry, American Highbush (Viburnum trilobum) Height: 3 - 10'

Moist to wet soils, full sun. Upright shrubs that can reach to 10' in height. Clusters of white flowers, berries bright scarlet, leaves turn bright scarlet in autumn. Used by ruffed grouse, songbirds, fox squirrels, deer, and chipmunks.

Currant, American Black (Ribes americanum) Height: 3 - 5'

This small-to-medium thornless shrub is an excellent choice for moist, shady sites. With an erect habit, its showy yellow flowers in early spring are followed by edible black berries in mid-summer.

Dogwood, Red Osier (Cornus sericca) Height: 5' - 10'

Tolerant of soil type; prefers moist soils. Native dogwood with silky green leaves that turn purplish in fall. Dense and fast-growing, makes a good low windbreak. Attractive even in winter, and attracts a variety of wildlife.

Dogwood, Silky (Cornus amomum) Height: 5' - 10'

Full to partial sun, tolerates range of soils, but prefers moist soils. Primary use is windbreaks, wildlife borders & habitat. Can be used for streambank stabilization and erosion control. Dense foliage turns red in fall followed by blue-grey berries.

Deadline for all orders: Friday, April 21, 2023

**Order early to ensure you get the species you want!*

Deciduous Trees

HARDWOODS	SUN	SOIL	GROWTH RATE
Birch, White (Paper)	full	moist	fast
Birch, Yellow	shade	moist	moderate
Hackberry*	full	dry-moist	med-fast
Hickory, Shagbark*	partial	moist	slow
Linden, American	full-partial	medium	moderate
Maple, Red	partial	dry-moist	moderate
Maple, Sugar	partial	medium	moderate
Oak, Bur	full	dry-moist	slow
Oak, Red	full	dry-medium	moderate
Oak, Swamp White*	partial	dry-moist	slow
Oak, White	partial	medium	slow
Sassafras*	partial	moist	moderate
Sycamore	partial	moist	fast
Tulip*	full	moist	fast
Walnut, Black	full	moist	moderate

Oak, Swamp White* (Quercus bicolor) Height: 50 - 60'

Partial shade to full sun. Grows rapidly. Likes acidic soil, survives in a wide range of habitats, drought-tolerant, and prefers swampy environs. Wildlife enjoys its sweet acorns. Wood presents exceptional value to woodworkers due to its hardness, durability and moderate price.

Oak, White (Quercus alba) Height: 60'-80'

Full to partial sun, grows in dry upland loamy soils. Produces sweet nuts eaten by deer, small mammals and turkeys. One of North America's most valuable timber oaks. Produces highest quality firewood. The red oaks are more susceptible to oak wilt; the white oak is a recommended replacement tree.

Sassafras* (Sassafras albidum) Height: 30-60'

Grows in full sun or partial shade, best in moist, well-drained acidic sites. Tolerates a wide range of soil types and can tolerate dry conditions. Showy yellow-green flowers followed by small bluish-black berries in September.

Sycamore (Platanus occidentalis) Height: 60-120'

Most recognizable by its peeling bark, the sycamore is a grand tree for a larger site. Often found growing along the banks of streams and rivers, the sycamore prefers rich, moist soil and full to partial sun.

Please note on Light Requirements:

Full means a minimum of 6 hours of direct sunlight per day

Partial means a minimum of 4 hours of direct sunlight per day

Shade means a maximum of 4 hours of direct sunlight per day

Conifer Trees:

Unless otherwise noted (*), all conifers listed are native to Michigan.

CONIFERS	SUN	SOIL	GROWTH RATE
Cedar, White	partial	moist	slow
Fir, Balsam	partial	moist	slow
Larch, American	full	moist	fast
Pine, Jack	full	dry	fast
Pine, Red	full	dry	fast
Pine, White	partial	medium	fast
Spruce, Black	partial	moist	slow
*Spruce, Colorado Blue	full	moist	slow
Spruce, White	partial	medium	moderate

*Due to limited supplies of bare-root seedlings, all conifers sold this year will be **Containerized Seedlings /Plugs** except for Colorado Blue Spruce.*

Cedar, Northern White (Thuja occidentalis) Height: 40'-50'

Does best in full sun. Also known as Arborvitae, this fast-growing, cold-hardy species enjoys limestone soils and moist, boggy areas. Dense lumber is prized for its resistance to rot. Great for hedges, screens and windbreaks.

Fir, Balsam (Abies balsamea) Height: 45 - 75'

This slow-growing evergreen prefers at least 4 hours of direct sunlight each day and can grow in full sun or partial shade. This traditional Christmas tree favorite can be used in the landscape as a windbreak. Prefers moist, cool, well-drained soil.

Pine, Eastern White (Pinus strobus) Height: 65'-90'

Moderately shade tolerant, wide range of soils. Michigan's official State Tree. Fast-growing and very windfirm. Needles soft, fine and flexible. Wood is light, soft, straight-grained, easily worked.

Conifer Trees

— All conifers are sold as containerized plugs unless otherwise noted —

Pine, Jack (*Pinus banksiana*) Height: 30'-55'

Prefers full sun, and does well in poor, sandy soils. The only nesting site for the endangered Kirtland's warbler. Very fast growing, extremely cold- and salt-tolerant. Excellent for wildlife cover, windbreaks, and timber production.

Pine, Red (*Pinus resinosa*) Height: 50'-80'

Full sun, prefers sandy soils. Also known as Norway Pine, it is native to north America. Fast growing. Needles sharp and brittle. Used for timber, reforestation and wildlife cover. Sheds lower branches as it matures.

Spruce, Black (*Picea mariana*) Height 40'-100'

Moderately shade tolerant and long lived, prefers moist soils (it is also called Swamp Spruce), but will grow in wide range of soil types. Abundant in the wild, provides vital habitat for grouse.

Spruce, Colorado Blue (*Picea pungens*) Height 50' - 75'

Sold as 6-12" bare-root seedling

This slow-growing spruce is native to the Rocky Mountains and can grow to 75' in the wild. One of the most widely-used trees for holiday decorations, it makes a wonderful choice for a Christmas tree. Pyramidal shape, silvery-blue foliage and wonderful smelling needles. Grows in range of soil types.

Spruce, White (*Picea glauca*) Height: 50'-80'

Shade tolerant, wide variety of soils, but does best on moist, fertile soil. Slow to moderate growth. Retains lower branches, excellent for wildlife cover, windbreaks & visual screening. Salt tolerant. Limited timber value.

Tamarack / American Larch (*Larix laricina*) Height: 40-80'

This native conifer loses its needles in the fall. Grows in a wide range of soil types. Does best where soil moisture is consistent. Grouse eat the buds and seeds, and deer will use Tamarack as cover. Needs @ < 6 hours full sun daily.

Deciduous Trees

Birch, Paper (Canoe) (*Betula papyrifera*) Height: 40-60'

Full sun, does best on moist soils. Also called White Birch. Catkins are a food source for grouse. Used for ornamental and wildlife purposes.

Sold as containerized seedling.

Birch, Yellow (*Betula allegheniensis*) Height: 60' to 75'

This cool-loving native of northeastern North America is often found growing on north-facing slopes and enjoys shade to part shade. Broken twigs have a wintergreen smell. The smooth bark is amber to silvery, and is shed in thin rolls. *Sold as containerized seedling.*

Deciduous Trees

ATREP species are marked with an asterisk *

Assisted Tree Range Expansion Project

The Assisted Tree Range Expansion Project (ATREP) is a community science project focused on supporting the resilience of Northern Lower Michigan's forests by planting tree species that are projected to be better adapted to our future climate.

Learn more at <https://www.atrep.net>

Hackberry* (*Celtis occidentalis*) Height: 40 - 130'

Tolerant of a wide range of soil types, from heavy clay to sand and conditions from dry to wet. This medium-to-fast grower needs full sun. Produces an edible fruit that attracts songbirds, upland birds and wild game, and turkey.

Hickory, Shagbark* (*Carya ovata*) Height: 70 - 90'

Known for its distinctive peeling bark, the leaves turn vibrant yellow or golden-brown in autumn. Produces edible nuts that feed a wide variety of birds and mammals, including humans. Prefers well-draining soil. Full sun to partial shade.

Linden, American/Basswood (*Tilia americana*) Height: 60 - 80'

Great for use as a shade or street tree, the linden or Basswood tree produces a straight trunk and valuable timber. It attracts lightning bugs, feeds mourning cloak butterfly larvae, and produces an abundance of nectar that honeybees love. Produces a showy profusion of fragrant, pale yellow flowers in late spring.

Maple, Red (*Acer rubrum*) Height: 65'-100'

Highly shade tolerant, prefers moist, fertile soil. Also referred to as "soft maple." Fast growing. Used as a shade tree and for pulpwood and low-grade lumber. Bright red fall foliage.

Maple, Sugar (*Acer saccharum*) Height: 60'-100'

Highly shade tolerant, moist fertile soils. Also referred to as "hard maple." Primary species of the northern hardwood forest. One of the prettiest trees for fall foliage. Slow growing, long lived.

Oak, Bur (*Quercus macrocarpa*) Height: 60'-80'

Moderately shade tolerant, tolerates variety of soil types; highly drought resistant, yet tolerates flooding. Most preferred acorn by wildlife. Slow growing, long-lived, fire resistant. *Sold as containerized seedling.*

Oak, Northern Red (*Quercus rubra*) Height: 65'-100'

Full to partial sun, likes well drained soils. Large versatile tree, fastest growing of the oaks. Susceptible to oak wilt. Produces abundant nuts eaten in late winter by deer, small mammals and turkeys. *Sold as containerized seedling.*
